PROFILE

Frontend Engineer with 16+ years building web experiences, full-stack when the work calls for it - from early design-led agency work to enterprise-scale React and TypeScript engineering. A career spanning digital agencies, retail brands, government platforms and fintech, with a genuinely broad view of how the web gets built across very different industries and teams.

Started out designing and building websites from the ground up for local authority and government platforms, where accessibility wasn't optional. That grounding shaped an approach carried through ever since: a specialism in WCAG/WAI-ARIA accessibility, tested with JAWS, NVDA and AXE, that most frontend engineers don't bring to the table.

For the last three years, delivering TypeScript-first engineering for enterprise fund management platforms at Edgefolio, including a company-wide UUID migration and an independently-delivered feature spanning React and Python/Django. Comfortable picking up new stacks and tools quickly, including current AI-assisted engineering workflows, and known for levelling up the people around me, from junior developers in code review to content teams using a CMS for the first time.

SKILLS

Core: React, TypeScript, JavaScript (ES6+), AG Grid, TanStack Query (React Query), Axios, Tailwind CSS, Radix UI, Jest, React Testing Library, Python, Django, REST APIs, Git, GitHub

Tooling & practice: Docker, Rspack, Webpack, Gulp, ESM, CI/CD (Turborepo), Agile, Scrum, Linear, Jira, Code Review, AI-assisted development workflows

Accessibility: WCAG 2.1/2.2, WAI-ARIA, semantic HTML, colour contrast compliance, AXE, Lighthouse, JAWS, NVDA

Also experienced in: Playwright (browser automation & testing), Angular, jQuery, Java, PHP, XML, XHTML, SiteCore, WordPress, Shopify, Liquid, Figma, Adobe Photoshop, Adobe Illustrator, BEM, SCSS/SASS, Bootstrap, Responsive Web Design, GSAP, Selenium, BrowserStack, SVN, GitKraken

CLIENTS & BRANDS

Financial services: JPMorgan, Bank of America, UBS, BNP Paribas

Retail, consumer & technology: ASDA, Walmart, Halfords, Microsoft, The Card Factory, Graco, Maxi-Cosi, Joie, Cow & Gate, Ella's Kitchen, Johnson's, Organix, Little Angels, Carl Cox

Public sector & education: Local authority and government platforms (LiquidLogic), Surpass (online assessment)

PROFESSIONAL EXPERIENCE

Frontend Engineer

Edgefolio | Apr 2023 - Present

Delivering TypeScript-first frontend engineering for Edgefolio's enterprise fund management platform, spanning legacy UI modernisation and new product delivery across three years, with full-stack ownership of select features.

- Delivered the Jurisdiction Permissions module in Manager Portal, a compliance-critical feature enabling 400 fund managers to define per-fund distribution eligibility ahead of a major client onboarding deadline.
- Led an architecture modernisation initiative, replacing 5 legacy elements (React 18, Webpack, zero automated test coverage, no Tailwind CSS, a dated third-party table library) with modern equivalents (React 19, Rspack, Turborepo, Jest, Tailwind CSS, TanStack Query, Axios and AG Grid) across the platform's frontend codebase.
- Migrated primary keys from integers to UUIDs across 4 core platform modules (Marketing Jurisdictions, Data Sharing, campaign templates, CRM), coordinating API contract changes directly with backend engineers.
- Independently delivered a full-stack Fund Groups migration to AG Grid as a solo workstream, building both the React frontend and the Python/Django backend, signed off by the Dev Lead.
- Designed a reusable custom field management system (drawer UI, API service layer, drag-and-drop reordering) adopted across 4 areas of the platform (Companies, Contacts, Introductions, and BNP Paribas-specific extensions).
- Shipped 3 major client-facing feature sets for Bank of America and redesigned UBS's Investor Portal onboarding flow end-to-end from Figma, including a responsive dual-branding layout.

- Built the Thales Agora Content Library frontend from the ground up, including migrating the video experience from Vimeo modal popups to inline playback with analytics tracking, sustaining ownership of the platform for nearly two years.
- Built and maintained a 300+ file Jest and React Testing Library test suite integrated into CI via Turborepo, and reviewed pull requests for 3 senior colleagues (the Principal Engineer, the Dev Lead and a co-founder), mentoring a junior engineer through review-based feedback.

Accessibility Developer / Frontend Web Developer

Surpass | Apr 2021 - Mar 2023

- Joined as the team's first dedicated accessibility hire, building components and fixing bugs in Angular for Surpass, a widely-used online assessment platform.
- Embedded WCAG 2.1/2.2 compliance and ARIA support into the Angular codebase from scratch, as part of a newly formed accessibility team.
- Audited accessibility compliance using 4 tools (AXE, Lighthouse, JAWS, NVDA), fixing colour contrast failures to bring the platform into line with WCAG standards.
- Partnered with designers and backend engineers to embed accessibility requirements at the design stage rather than as a late-stage fix.

Shopify Developer (Contract)

WeMakeWebsites | Oct 2020 - Mar 2021

- Coded Shopify components and web pages from Figma designs across multiple concurrent client builds during a 6-month contract.
- Shipped new functionality to the Shopify platform, resolved bugs and layout issues, and built hands-on experience with Shopify's Liquid templating language.

Frontend Web Developer & Designer

LiquidLogic | Nov 2018 - Oct 2020

- Joined as the team's dedicated accessibility specialist at LiquidLogic, the fastest-growing supplier of software for Local Authority Social and Adult Care and Education services.
- Built and managed multiple government and local authority websites from the ground up (HTML/CSS/jQuery/JavaScript), running functional and A/B testing on each.
- Planned, designed and implemented site structure, navigation and UX/UI across multiple builds, leading delivery alongside back-end engineers and QA testers.

Frontend Web Developer & Designer

GIG Retail | Jan 2018 - Sept 2018

- Continued delivery across 3 major retail accounts (ASDA, Walmart UK, The Card Factory) following a TUPE transfer, strengthening the frontend stack for each brand.
- Built SiteCore websites and developed WordPress client sub-sites from scratch, including full theme development for content managers.
- Maintained frontend quality and brand standards across 3 concurrent retail accounts throughout the TUPE transition period.

Frontend Web Developer & Designer

Triad Retail Media, Miami/Leeds | Sep 2013 - Jan 2018

- Built the ASDA Baby & Toddler Club hub from the ground up, reaching over a million views at its peak.
- Delivered 2 product launch pages for Microsoft (Tomb Raider, Forza) and created brand pages and mini-sites for 5 consumer brands (Little Angels, Cow & Gate, Ella's Kitchen, Johnsons, Organix).
- Led an outsourced development team in India (borngroup.com), managing workload, timelines and SVN check-ins across time zones, an early taste of engineering leadership carried through into every role since.
- Developed 4 interactive tools (Ovulation Tool, Nappy Sizer, Car Seat Selector, Pregnancy Trimester Tool) for brands including Graco, Maxi-Cosi and Joie.

EARLIER CAREER (2010 - 2013)

Frontend Web Developer / Web Designer, Chapter Eight, Leeds (2013) - Built event platform websites for 3 clients (Carl Cox, VooDoo Events, No Curfew Events), integrating the "Event Genius" ticketing platform as a CMS.

Frontend Web Developer / Web Designer, Barker Brooks, Leeds (2012-2013) - Launched a new "Digital" line for the publishing and creative arts firm and led the build of its first eCommerce website.

Frontend Web Developer / Senior Web Designer, Capita / Pay360, Oldham (2010-2012) - Built an ePayment gateway and local council websites (HTML/XHTML/JavaScript/CSS/PHP) over 2 years, progressing from Web Designer to Web Developer.

EDUCATION

MSc Software Engineering - University of Bradford (2008-2009)

BSc Computer Science - University of Bradford (2005-2008)
