PROFILE

Frontend Engineer with 16+ years building web experiences - from early design-led agency work to enterprise-scale React engineering. A career spanning digital agencies, retail brands, government platforms, and fintech, with a genuinely broad view of how the web gets built across very different industries and teams.

Started out designing and building websites from the ground up - HTML, CSS, jQuery, JavaScript - for local authority and government platforms, where accessibility wasn't optional. That grounding shaped an approach carried through ever since: a specialism in WCAG/WAI-ARIA accessibility, with teams specifically seeking this expertise, alongside testing using JAWS, NVDA, and AXE.

Frontend delivery for major brands including ASDA, Walmart, Halfords, Microsoft, and Carl Cox - everything from full brand hubs and eCommerce platforms to product launch pages and interactive tools used by millions of customers. At Triad Retail Media, led an international outsourced development team based in India, managing workload, timelines, and code quality across time zones - an early taste of engineering leadership carried through into every role since.

More recently, a full move into modern frontend and full-stack engineering - building enterprise fund management platforms for clients including JPMorgan, Bank of America, UBS, and BNP Paribas, working with React, TypeScript, and complex, data-heavy UI such as AG Grid tables, custom field systems, and large-scale ID migrations.

Across 16 years, the constants have stayed the same: code built to last, interfaces that work for everyone, and a habit of levelling up the people around me - from content teams using a CMS for the first time, to junior developers picking up new patterns through code review.

SKILLS

Current: React, TypeScript, JavaScript, AG Grid, TanStack Query, Axios, Tailwind CSS, Radix UI, Jest, React Testing Library, Python, Django, REST APIs, Git, GitHub, Rspack, Webpack, Gulp, ESM, CI/CD, Agile, Scrum, Linear, Jira, Code Review

Accessibility: WCAG 2.1/2.2, WAI-ARIA, semantic HTML, colour contrast compliance, AXE, Lighthouse, JAWS, NVDA

Also experienced in: Angular, jQuery, Java, PHP, XML, XHTML, SiteCore, WordPress, Shopify, Liquid, Figma, Adobe Photoshop, Adobe Illustrator, BEM, SCSS, SASS, Bootstrap, Responsive Web Design, GSAP, Selenium, BrowserStack, SVN, GitKraken

PROFESSIONAL EXPERIENCE

Frontend Engineer

Edgefolio | Apr 2023 - Present

Delivering TypeScript-first frontend and full-stack engineering for enterprise fund management platforms serving major financial institutions including JPMorgan, Bank of America, UBS, and BNP Paribas, across three years spanning both legacy UI modernisation and new product delivery.

- Built the Thales Agora Content Library frontend from the ground up, including a full video experience migration from Vimeo modal popups to inline playback with analytics event tracking - sustained ownership of the platform across nearly two years.
- Delivered JPMorgan-branded investor dashboard features from the platform's early releases, including the Insights and My Matches sections, brand-compliant UI updates, and UAT-driven releases.
- Led a company-wide UUID migration end-to-end, transitioning AG Grid components and Django templates from integer primary keys to UUIDs across Marketing Jurisdictions, Data Sharing, campaign templates, and CRM modules - coordinating directly with backend engineers on API contract changes.
- Independently delivered a full-stack Fund Groups migration to AG Grid, building both the React frontend and the associated Python/Django backend, with sign-off from the Dev Lead to run it as a full-stack workstream.
- Delivered the Jurisdiction Permissions module in Manager Portal, a compliance-critical feature enabling 400 fund managers to define per-fund distribution eligibility ahead of a major client onboarding deadline.

- Designed and built a reusable custom field management system (drawer UI, API service layer, form integration, drag-and-drop reordering) used across Companies, Contacts, and Introductions - later extended to meet BNP Paribas-specific requirements.
- Delivered major client-facing features for BofA including the Events module (Events for Investors and Cap Intro) and the Content module (Content Sharing and Distribution), along with a Groups/CRM overhaul, working from Figma specifications through to production.
- Improved fund data update page UX for UBS, and redesigned the Investor Portal onboarding flow end-to-end from Figma with responsive dual-branding layouts.
- Diagnosed and resolved a range of production and legacy issues across the platform - from full-stack serializer bugs to third-party library upgrade regressions - working confidently across both new feature work and legacy code.
- Reviewed a high volume of pull requests across both engineering teams over the course of the role, including for the Principal Engineer, the Dev Lead, and a co-founder; provided review-based mentoring to a junior engineer.
- Maintained and extended a substantial frontend test suite (300+ test files) using Jest and React Testing Library, integrated into the CI pipeline via Turborepo.
- Proactively triaged and resolved a large batch of open frontend Dependabot security vulnerabilities, followed by a self-initiated audit of package override configuration.
- Led daily stand-ups for the team during the Dev Lead's absence.

Accessibility Developer / Frontend Web Developer

Surpass | Apr 2021 - Mar 2023

- Primarily hired to create components and fix bugs using Angular as the framework and to initiate and apply accessibility to the world-renowned online test software known as Surpass.
- Worked as part of a newly formed team from scratch, implementing ARIA and working with Angular code to apply accessibility (WCAG 2.1/2.2) deep into the code.
- Fixed colour contrast issues which were failing accessibility standards across the platform.
- Conducted accessibility audits and testing using AXE, Lighthouse, and screen reader tools (JAWS, NVDA) to validate compliance.
- Collaborated closely with designers and backend engineers to embed accessibility considerations early in the development process, rather than as a late-stage fix.

Shopify Developer (Contract)

WeMakeWebsites | Oct 2020 - Mar 2021

- Worked with WMW's in-house development team as a Shopify developer, directly involved in coding Shopify components and web pages from Figma designs from scratch.
- Deployed various components of key functionality onto the Shopify platform.
- Carried out bug fixing, updates, and amending layouts using the latest CSS techniques.
- Gained expanded knowledge of the eCommerce and digital marketing landscape, and experience with Shopify's Liquid templating language.
- Benefited from the contract structure to work across multiple client builds in parallel, sharpening delivery speed under tight turnarounds.

Frontend Web Developer & Designer

LiquidLogic | Nov 2018 - Oct 2020

- Hired by the fastest growing supplier of software and web solutions for Local Authority Social and Adult Care and Education services, brought on board to add expertise to the team and accessibility expertise.
- Built websites from the ground up using HTML/CSS/jQuery and JavaScript, integrating software into these websites. Managed many government/local authority websites, conducting both functional and A/B testing.
- Used an in-house built Java-based platform as a core CMS and built templates for websites/webpages with the flexibility to be used by content specialists.
- Planned, designed, and implemented website structure, navigation tools, UX/UI priorities, and dynamic content without compromising functionality.
- Led teams through to successful outcomes, including through collaborations with back-end engineers and QA testers.

Frontend Web Developer & Designer

GIG Retail | Jan 2018 - Sept 2018

- TUPE'd to GIG Retail to continue work on the ASDA, Walmart UK, and The Card Factory accounts and to increase the power of the frontend stack for brands.
- Worked with SiteCore to build various websites using HTML/CSS/jQuery and JavaScript, using designs and converting them to digital templates for content managers to create and amend articles/pages.
- Forged functional relationships with brands, suppliers, and stakeholders, and planned integrated campaigns with visually and functionally powerful frontends.
- Worked with WordPress as a platform to host and build strong client sub-sites to showcase new product information and show reels, undertaking theme development from scratch and manipulating fixes and layouts using hard-coded PHP.
- Maintained consistency of frontend quality and brand standards across multiple concurrent retail accounts during the TUPE transition period.

Frontend Web Developer & Designer

Triad Retail Media, Miami/Leeds | Sep 2013 - Jan 2018

- Built the ASDA Baby & Toddler Club hub from the ground up using HTML/CSS/jQuery and JavaScript, creating brand-new content pages, brand pages, and animated banners for pre- and post-pregnancy articles, recipes, and tools.
- Worked with back-end developers based in the US, collaborating on projects for Walmart and Halfords, and created brand/product launch pages for Microsoft (Tomb Raider, Forza).
- Created brand pages and mini websites for Little Angels, Cow & Gate, Ella's Kitchen, Johnsons, and Organix, using SiteCore and WordPress.
- Managed, as lead, the outsourcing of a development team based in India (borngroup.com), handling time, workload, and check-ins into SVN.
- Created and embedded new interactive tools including an Ovulation Tool, Nappy Sizer, Car Seat Selector, and Pregnancy Trimester tool, working with brands such as Graco, Maxi-Cosi, and Joie.

EARLIER CAREER (2010 - 2013)

Frontend Web Developer / Web Designer, Chapter Eight, Leeds (2013) - Built event platform websites for Carl Cox, VooDoo Events, and No Curfew Events, integrating the "Event Genius" ticketing platform as a CMS.

Frontend Web Developer / Web Designer, Barker Brooks, Leeds (2012-2013) - Headed up a new "Digital" line for the publishing and creative arts firm and led the build of its first eCommerce website.

Frontend Web Developer / Senior Web Designer, Capita / Pay360, Oldham (2010-2012) - Built ePayment gateway, XML, and local council websites (HTML/XHTML/JavaScript/CSS/PHP), progressing from Web Designer to Web Developer.

EDUCATION

MSc Software Engineering - University of Bradford (2008-2009)

BSc Computer Science - University of Bradford (2005-2008)
